

Camunda Platform 8

The Universal Process Orchestrator

Many businesses struggle to build scalable, resilient automation of **complex business processes** that span across **people, systems, and devices**. In particular, the integration of legacy systems and homegrown applications is time-consuming and requires extensive developer resources.

To solve this problem, **Camunda Platform 8** provides organizations with speed, scale, security and resiliency without the overhead of building and maintaining infrastructure. The breakthrough in horizontal scalability is made possible by Zeebe, Camunda's next-generation, **cloud native workflow engine**.

The Camunda Difference

Orchestrate across every endpoint

Camunda Platform 8 is designed for integration with all of the diverse process endpoints that make up your end-to-end business processes, from microservices to human tasks to legacy systems, and everything in-between. Camunda unlocks universal connectivity by providing you with essential connectors and an integration framework that allows software developers to build custom connectors for reuse across teams.

Bring IT and the business together

Bridge gaps, reduce process design time & enable deep collaboration within the organization

Deep collaboration between teams helps ensure business agility by drastically reducing the time it takes to design and agree upon process changes. The BPMN and DMN standards bridge the gap between software developers and business stakeholders, reducing the time it takes to design processes and bringing teams together to speak the same language.

Get unparalleled speed, scale, and resilience

Unlimited transactions at consistent low latencies & a failover architecture with geo-replication across global data centers

Zeebe scales throughput linearly by adding cluster nodes, allowing for processing an unlimited amount of transactions at consistent low latencies. To ensure resilience, Zeebe comes with a failover architecture that supports geo-replication across data centers to provide high availability.

About Camunda

Camunda is the leader in process orchestration software. Our software helps orchestrate complex business processes that span people, systems, and devices. With Camunda, business users collaborate with developers to model and automate end-to-end processes using BPMN-powered flowcharts that run with the speed, scale, and resiliency required to compete in today's digital-first world. Hundreds of enterprises such as Atlassian, ING, and Vodafone design, automate, and improve mission-critical business processes with Camunda to drive digital transformation. To learn more visit camunda.com.

Design

Developers & business users collaborate to design, connect & deploy processes with Camunda.

Modeler

Model & deploy business process diagrams with BPMN & DMN.

Available via web and desktop app.

Connectors

Out-of-the-box integrations to easily communicate with popular enterprise applications & protocols.

Integration Framework

Build & provision your own connectors to any system including home-grown & legacy applications.

Forms

Drag & drop creation of forms that power workflows that require human interaction.

Automate

Enterprise-grade automation platform. Built for today's business complexity, loved by developers.

Zeebe

Next generation cloud native workflow engine that unlocks unparalleled speed, scale & resilience.

Open source SDKs in your preferred programming language brings the extensibility you need for your complex business processes.

Tasklist

Assign and execute tasks that require human interaction via easy-to-use Forms or via your own apps with the Tasklist API.

Operate

Real time visibility to monitor, analyze and resolve problems with any process instance.

Improve

Teams have the insights to fix the highest ROI problems for their business processes.

Optimize

Get the insights you need to understand and continuously improve your business processes.
