

Advanced BPMN Patterns

**CAMUNDA
COMMUNITY
SUMMIT 2023**

About Me

Hendrik Kupitz
Trainer & Consultant
Camunda

- ❤ BPMN
- Studied *Computer Science (B.Sc.)* & *Information Systems Engineering (M.Eng.)*
- Passionate coder since youth
- Worked at FH Aachen as a lecturer & research assistant
- Joined Camunda in 2021

A pattern is a regularity in the world, in human-made design, or in abstract ideas. As such, the elements of a pattern repeat in a predictable manner.

Achraf Garai

“What are Design Patterns?”

Events

Activities

Gateways

Sequence Flows

Product Order

A customer wants to order a new product

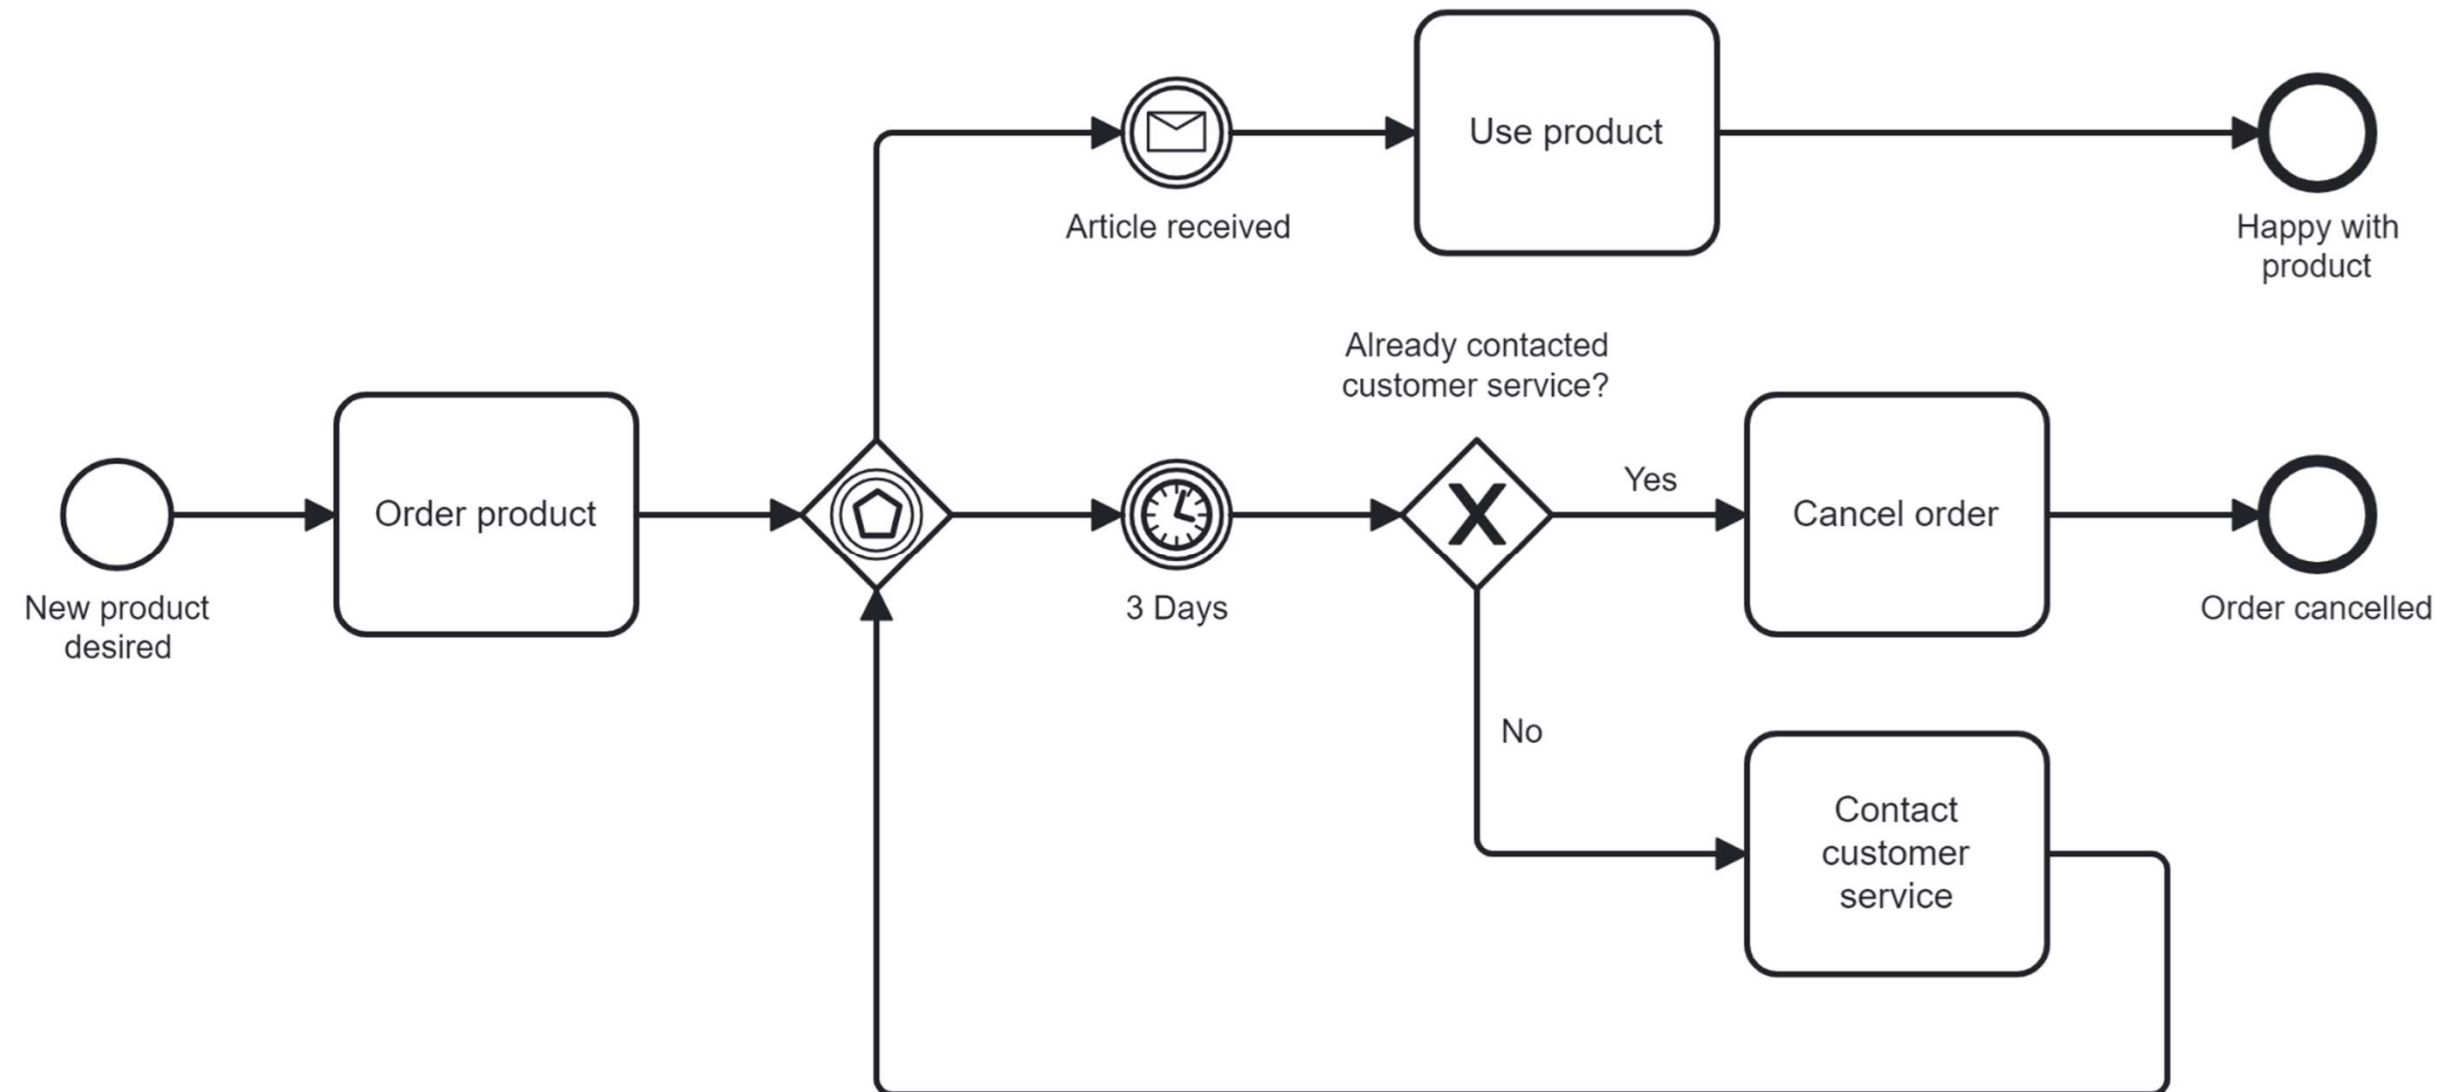

After 3 days without receiving the product they contact the customer service

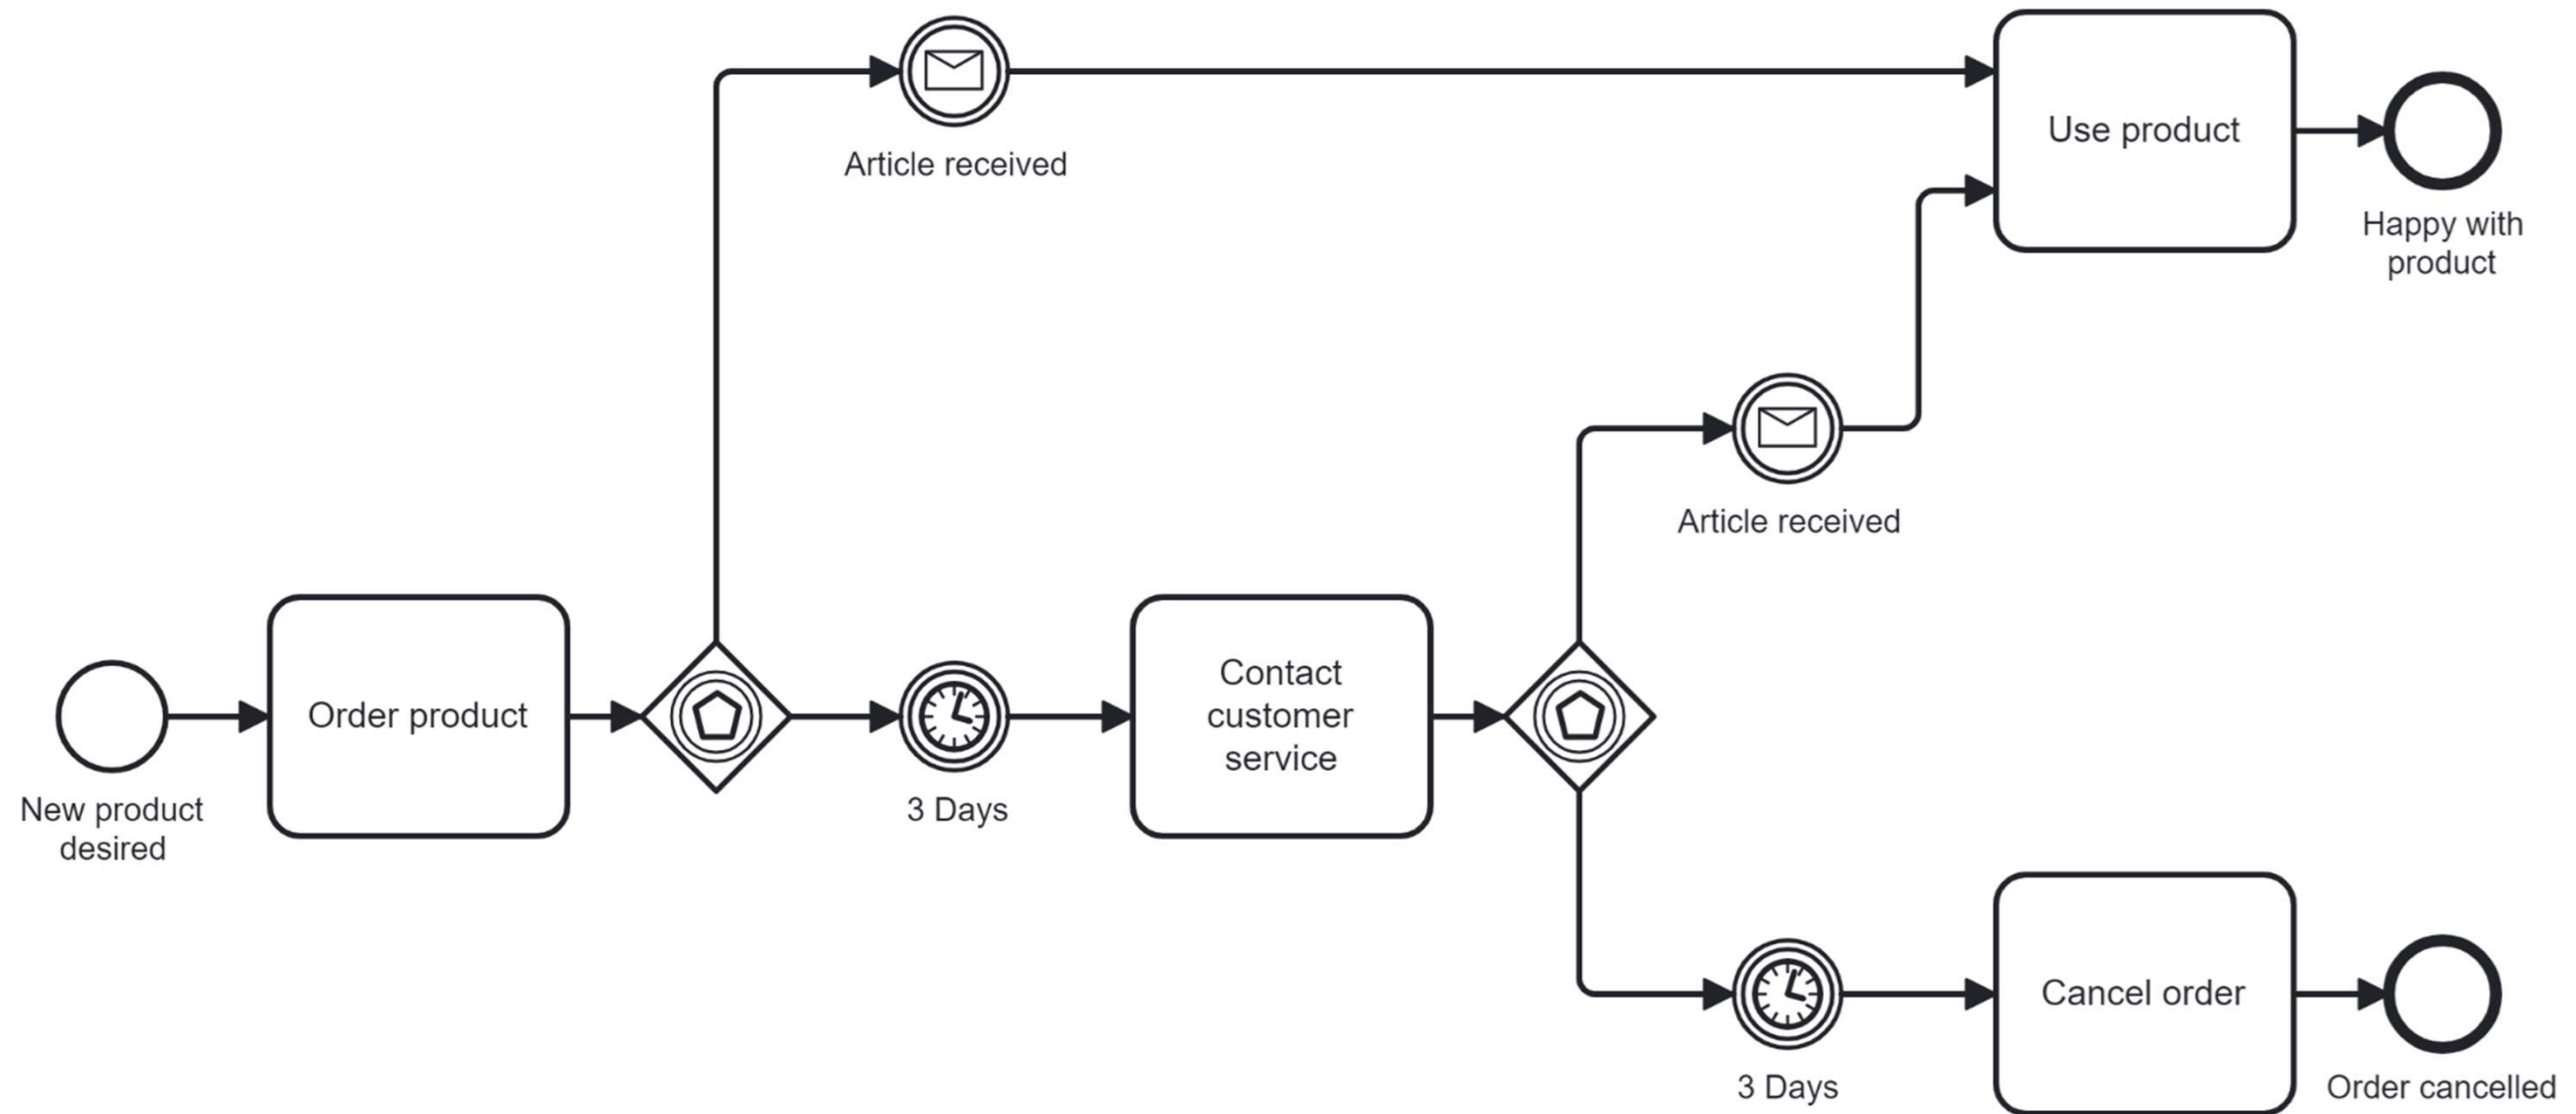

After 6 days without receiving the product they cancel the order

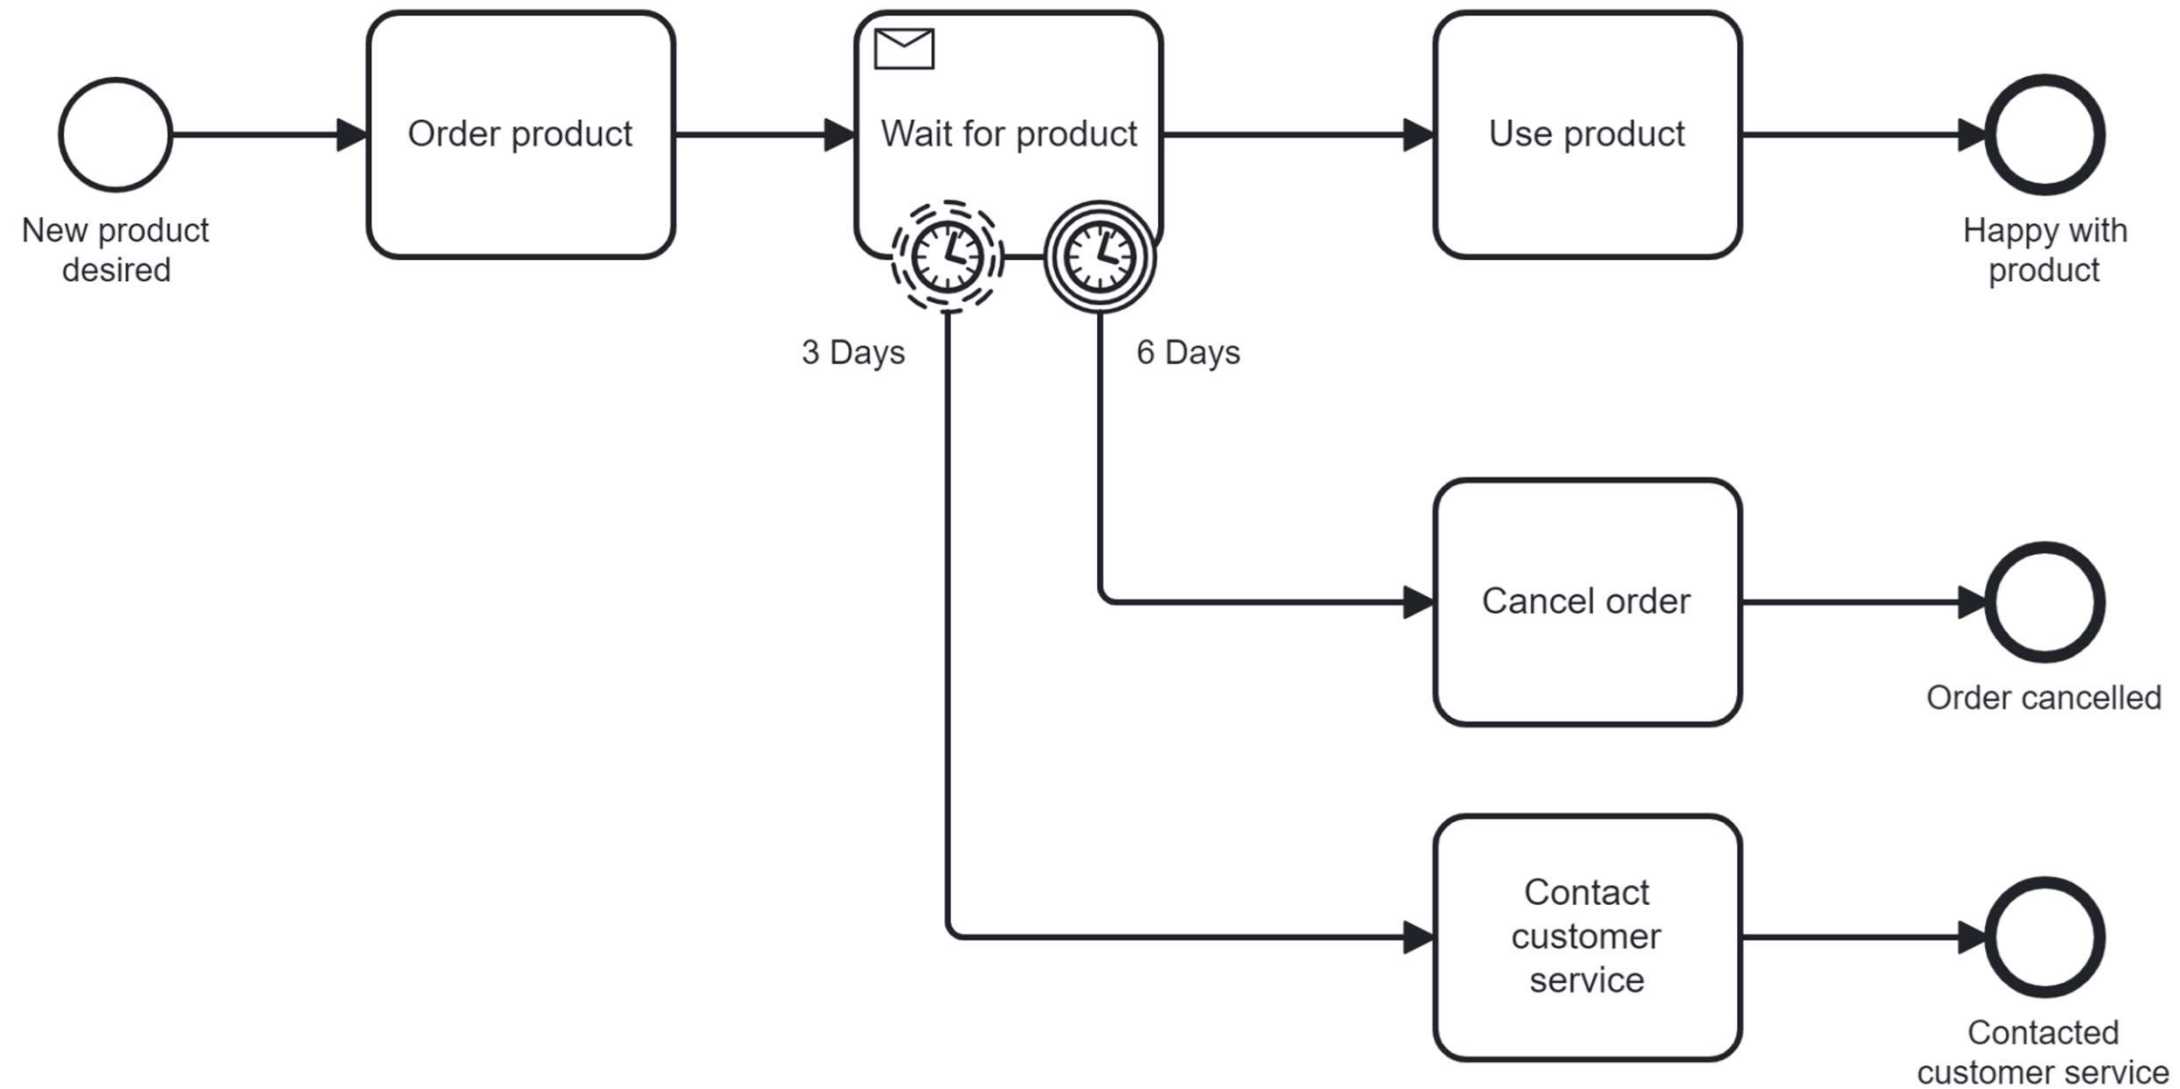

Product Order | Event-based Loop

Product Order | Two-Stage EBG

Product Order | Boundary Events

Broadband Expansion

An internet provider allows cities to flexibly expand their internet infrastructure

At any point new households can sign up

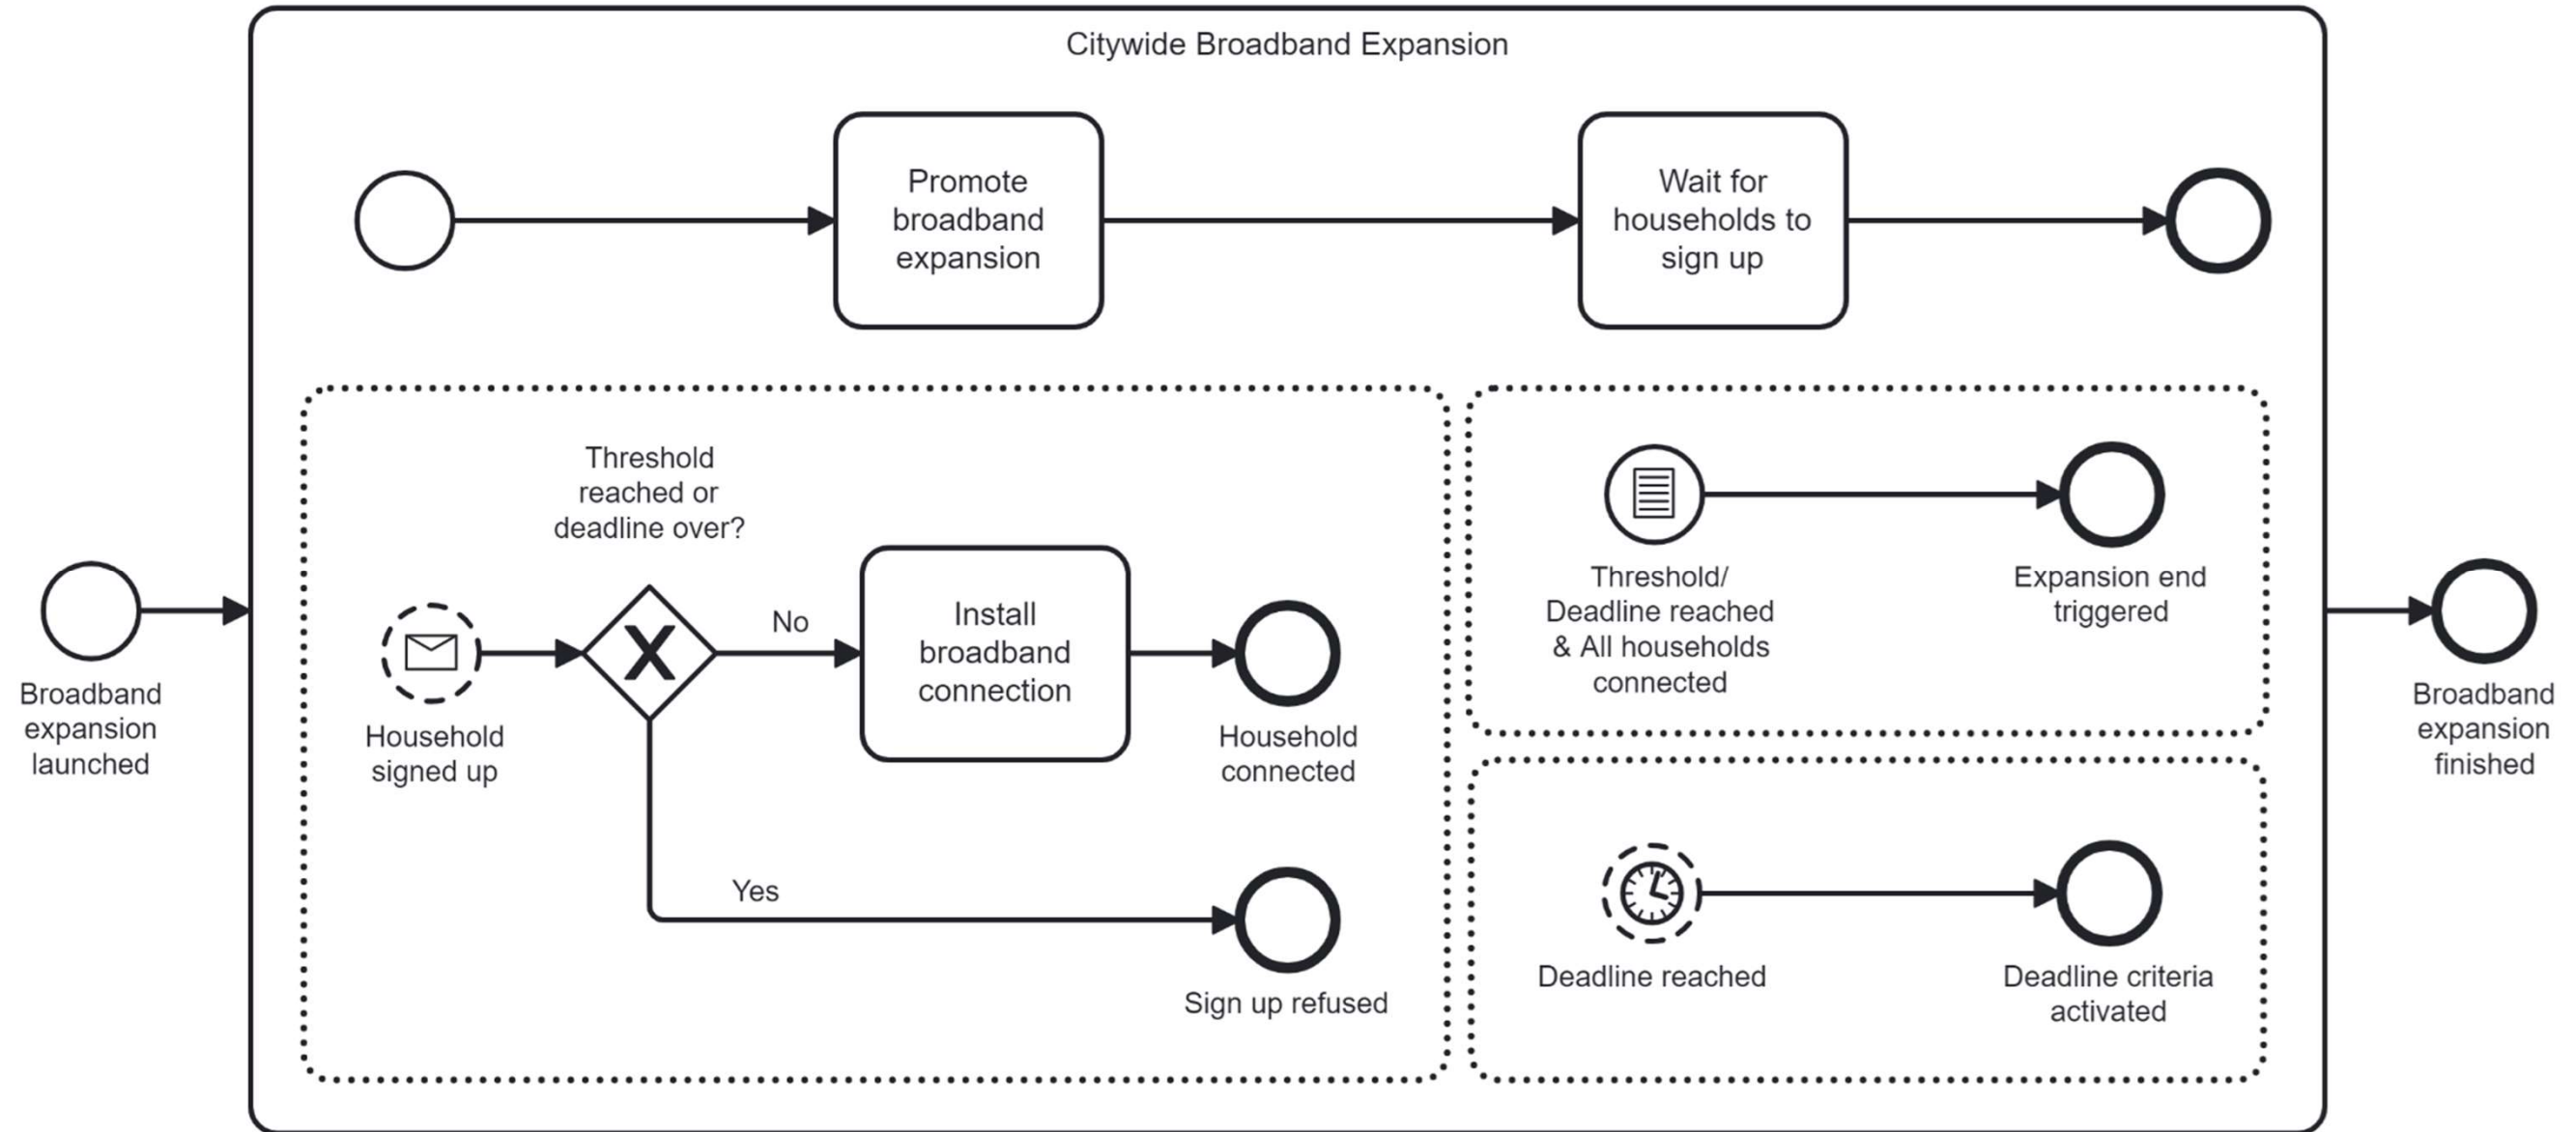

Contract has a maximum threshold of households to be connected

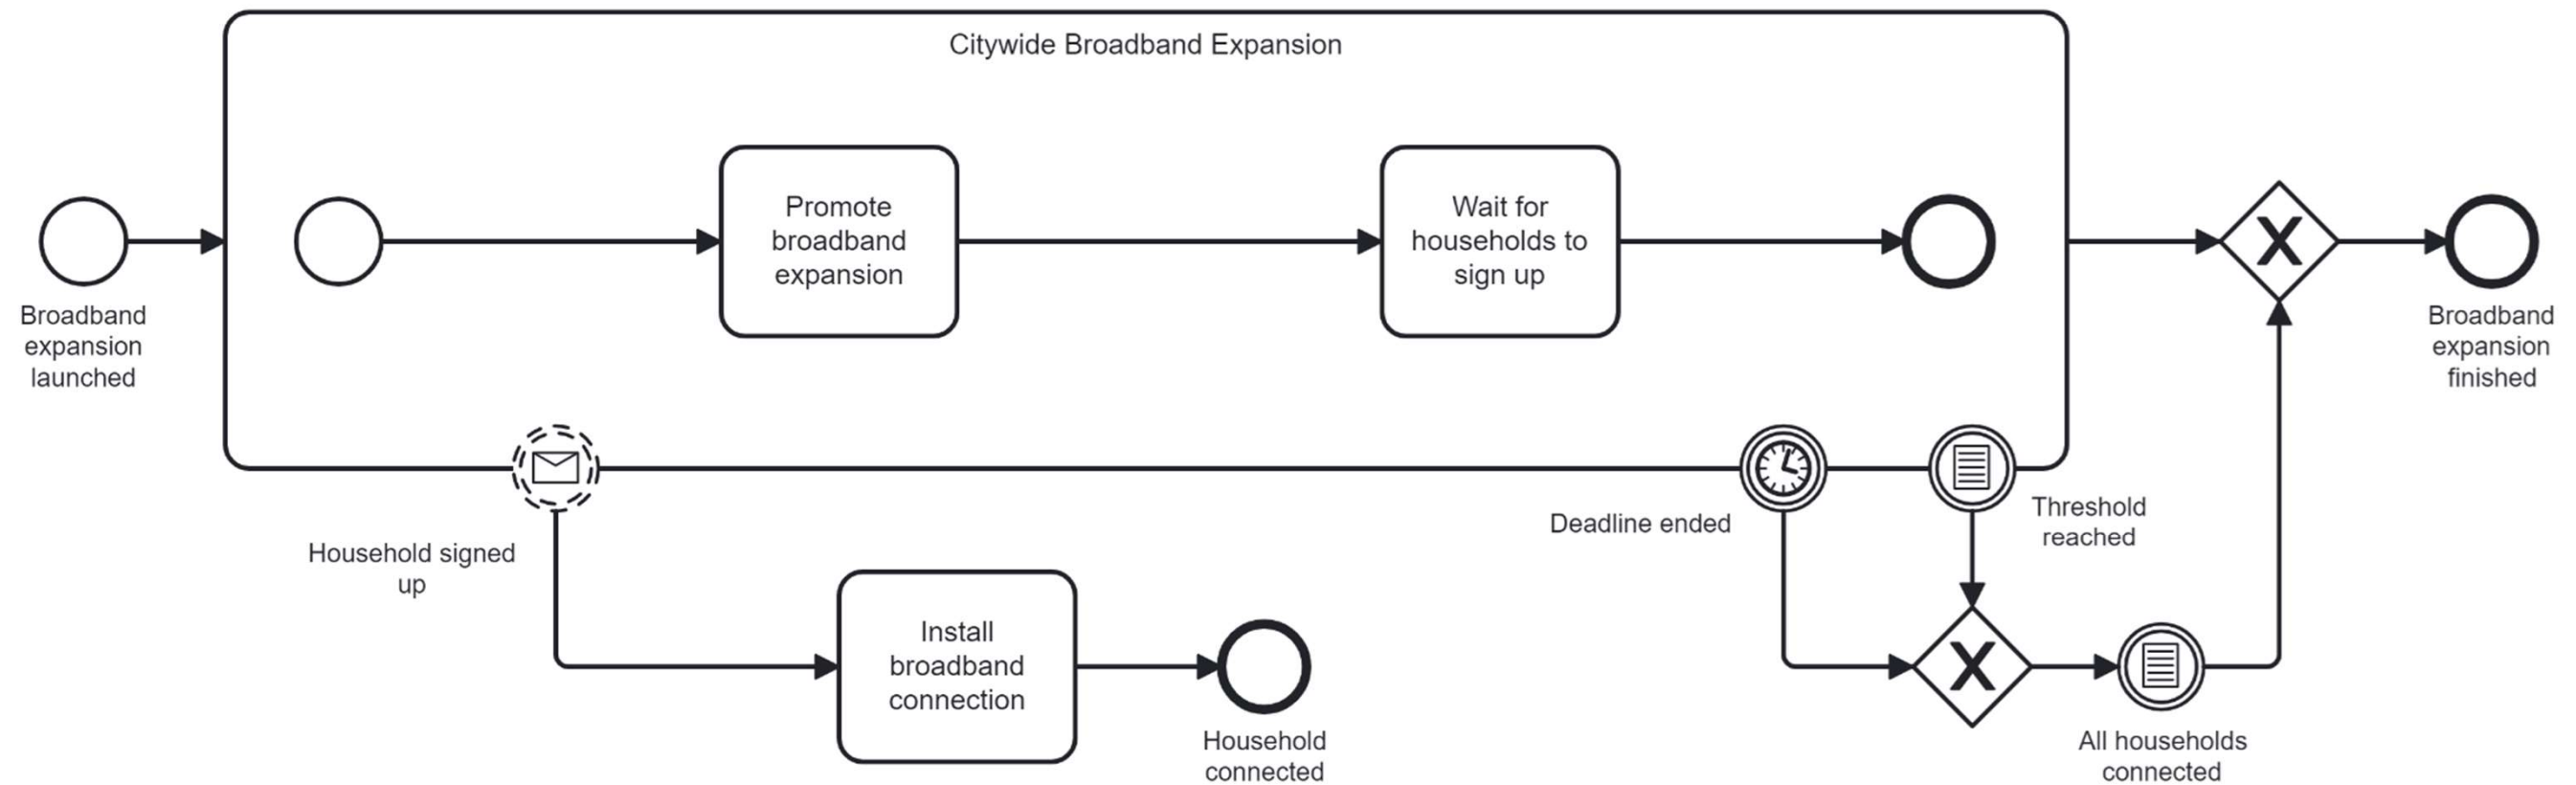

Contract runs out after a certain amount of time

Broadband Expansion | Event Subprocess

Broadband Expansion | Boundary Events

A complex situation...

A company often needs external consulting

Per convention three offers need to be asked for

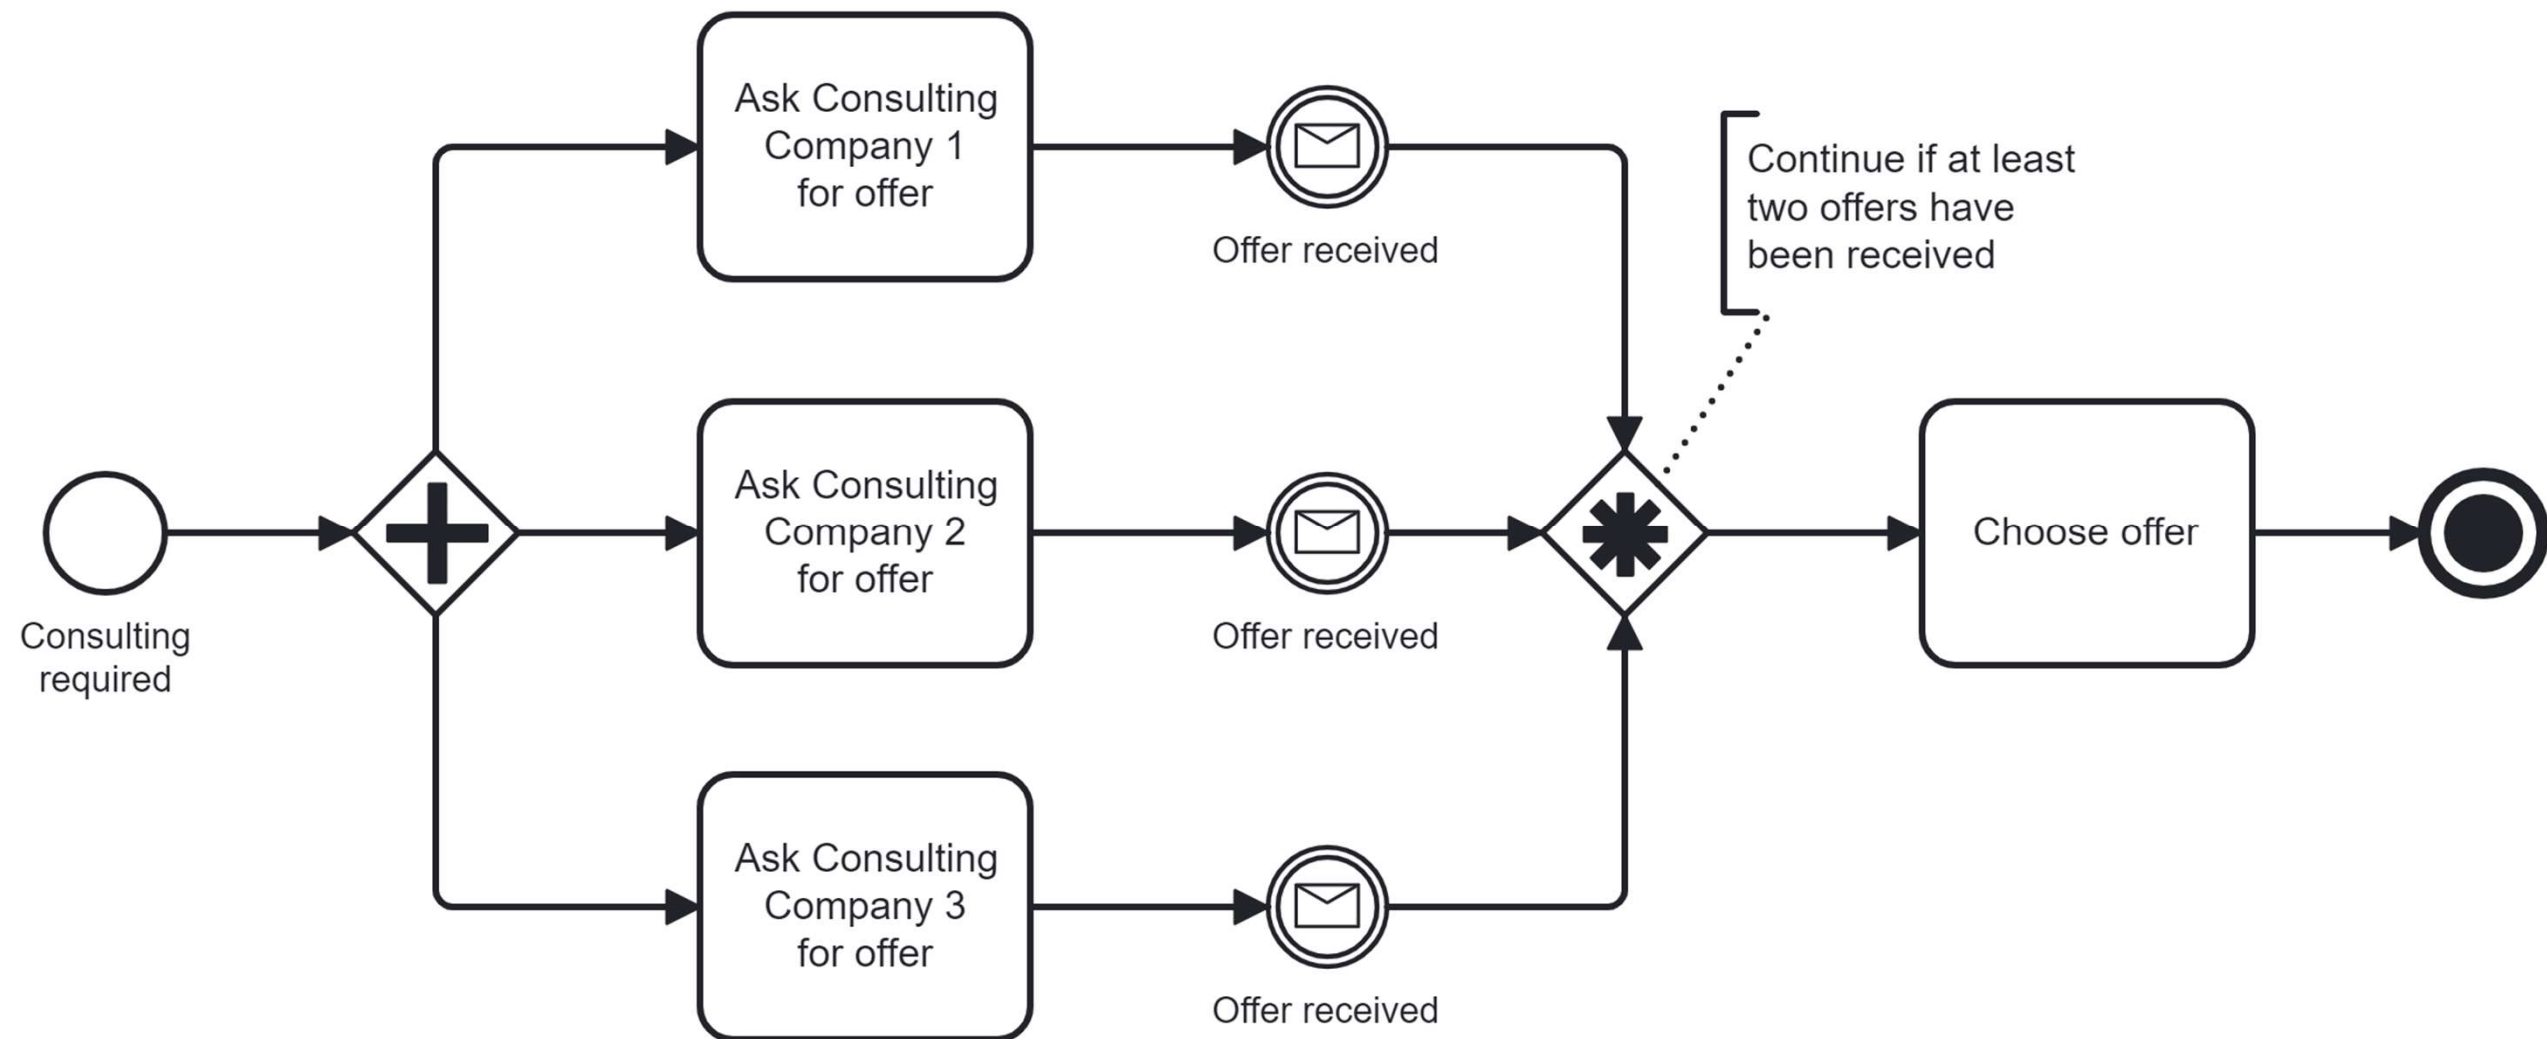

Once two offers have been received
an offer is chosen

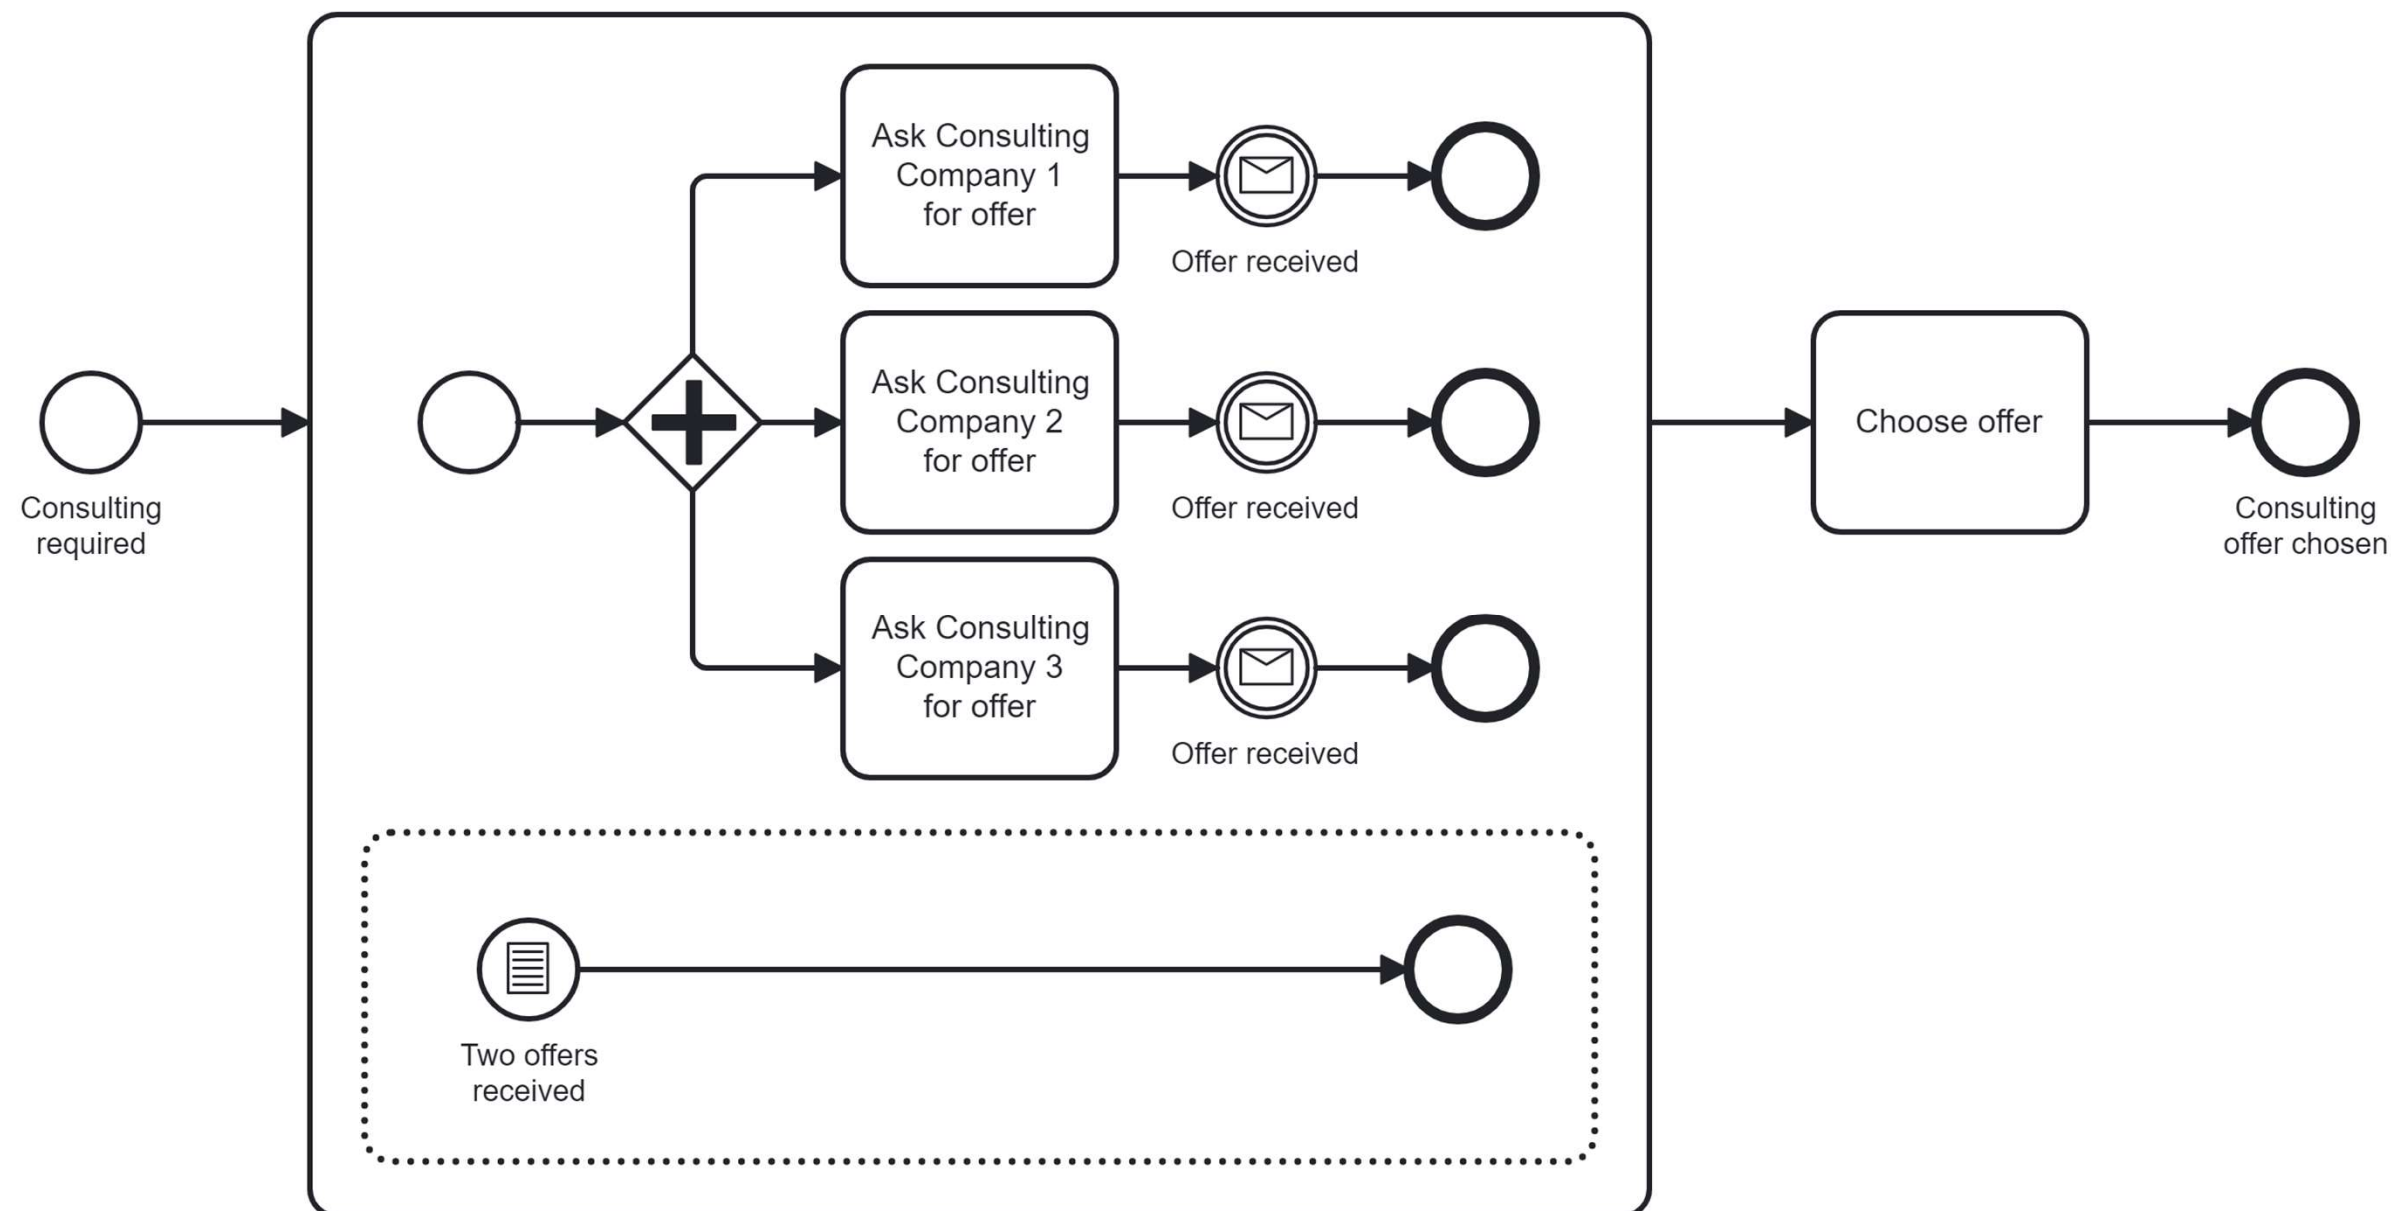

A Complex Situation | Complex Gateway

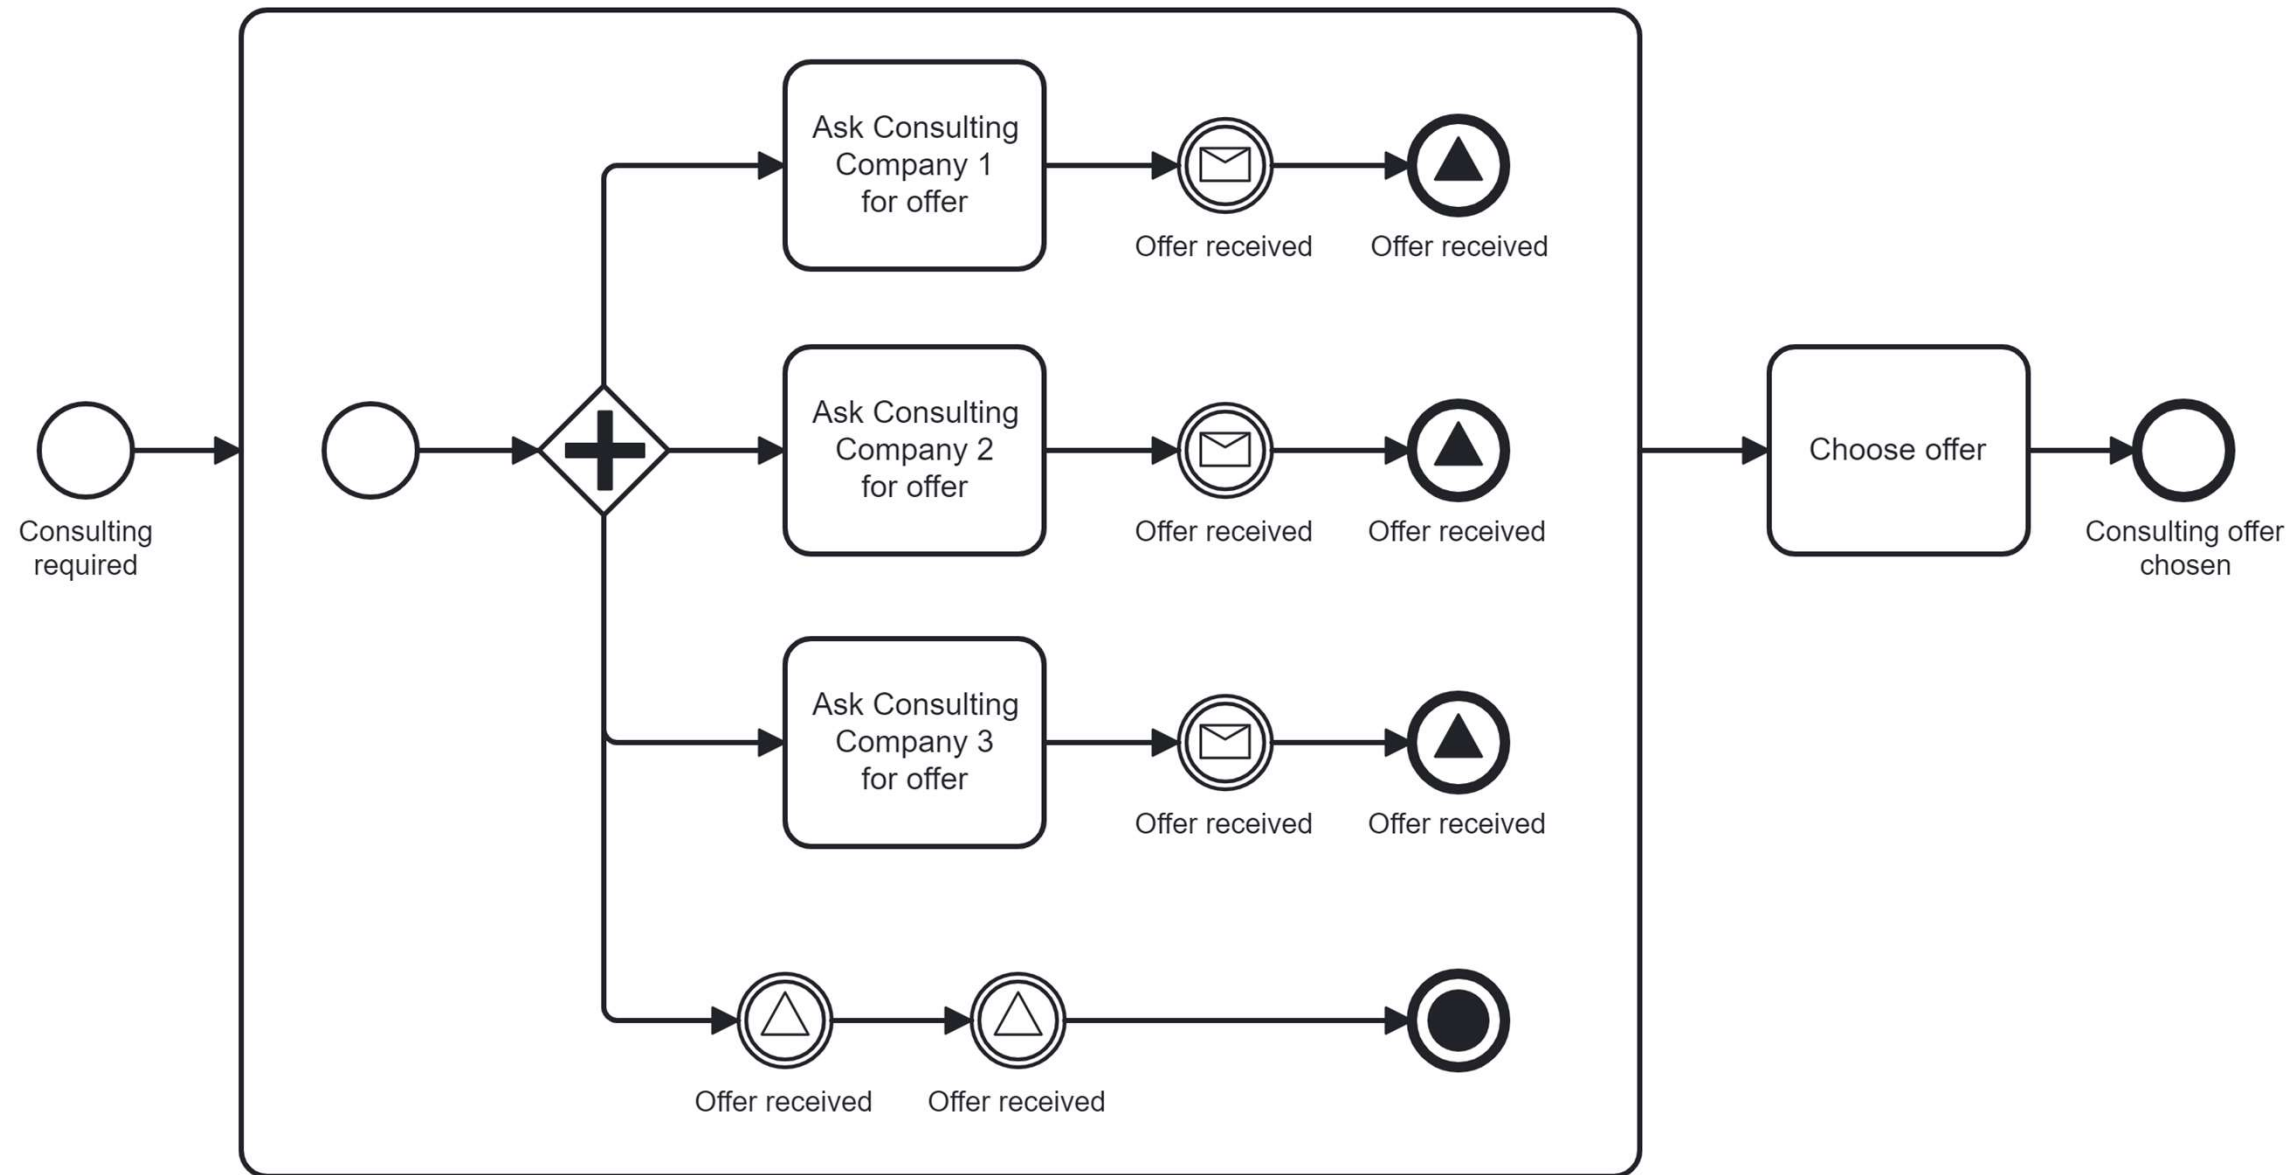

A Complex Situation | Complex Gateway

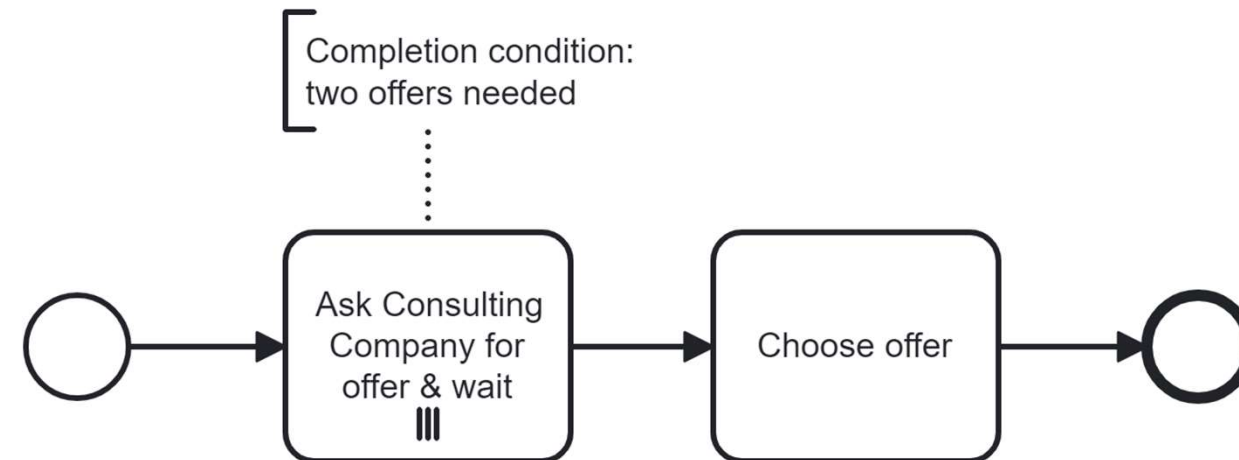

A Complex Situation | EB Subprocess

A Complex Situation | Signals

A Complex Situation | Multi-Instance

Criteria for choosing a Pattern

1

Ease of Understanding

2

Readability

3

Target Group

4

Flexibility

5

Reusability

6

Existing Styleguide

7

Implementation Implications

8

Workflow Engine Characteristics

9

BPMN semantics

How to Pattern...

Identification

Figure out which kinds of problems you encounter a lot

Research

Check resources for existing patterns

Consistency

Apply patterns in a consistent fashion

Discussion

Talk about use cases and potential BPMN representations

Iteration

Iterate & refactor your process models to improve them

Thank You
